ELEKS: THREE DECADES OF HELPING BUSINESSES ELEVATE THEIR VALUE THROUGH CUSTOM SOFTWARE DEVELOPMENT

Outsourcing software development is an option of choice as companies of all sizes optimize their responsiveness to the ever-changing digital economy. Business leaders are driving the trend, asking IT teams to deliver more value at a greater rate while minimizing cost and risk. And while cost, efficiency, and scalability remain the important drivers behind outsourcing, the priorities and decision-making criteria are shifting towards partnership and trust. For many companies, finding a reliable software development vendor is the difference between dominating the scene or lingering in the backyard of their market.

ELEKS entered the software development market almost 30 years ago. The company launched in 1991 in Ukraine, with a scientific software solution for power distribution systems. Since the very beginning, ELEKS’ key focus and competence has been creating science-intensive, complex solutions that address real-world problems in the most efficient ways. Clients choose us for our ability to solve complex technology problems and continuously deliver the highest-quality software. Many of our clients have been with us for more than 15 years.

Now, ELEKS is a global delivery unit, spread across three continents, with highly skilled engineers – including a dedicated R&D team. With more than 65% of our business in the US, the company has a permanent onsite presence in Chicago to be closer to our customers in the Midwest and strengthen our position as a trusted innovation partner.

ELEKS started as a product company, and this has a continuing impact on the company’s culture: most of our people are explorers and problem solvers, on top of being expert software developers. For those most complex of challenges, we’ll engage experts with a grounding in physics and mathematics – to guarantee success where software expertise alone might not be enough. The company’s reputation as an innovation hub with challenging projects allows us to hire top talent in the environment of deficit employment market.

“ELEKS has some of the strongest resources that we’ve seen. The people that we’ve been working with are really deeply technical and have helped us to solve some amazing challenges – they don’t just want to be a part of the team, they want to help you think through the problem.”
- Dan Naselius, President & CTO at Coras

To date, we’ve completed more than 700 end-to-end projects. We not only deliver software development and quality assurance services, but continuously expand our portfolio, adding services that meet the market’s most advanced tech needs. Among the most recent additions are compliance automation and consulting, product design, and digital enterprise consulting.

As ELEKS grows geographically, we continue to gain a better understanding of the cultural differences that impact our clients, by being close and learning first-hand. We not only open offices, but immediately integrate into the local tech community by organizing and participating in networking events, such as tech talks, conferences, and knowledge-sharing sessions.
